

PRIME RESINS

Supplying products worldwide

www.primeresins.com

PRIME RESINS is a leading manufacturer of chemical grouts, foams, adhesives, and coatings for infrastructure repair and protection. We provide solutions for problems in structural repair, leak sealing, coating/lining, slab lifting, and soil stabilization.

What sets Prime Resins apart?

- **Technical expertise:** We were the first in our field to offer 24/7 technical support. Our service is the best in the business.
- **Turnaround time:** We have the fastest turnaround in the industry. Many shipments go out within a business day of the order.
- **Training:** We provide on-site training, application assistance, project consultations, and training seminars at our headquarters.
- **Great value:** We offer the best combination of product performance, expertise, and experience.
- **Solutions focus:** We work as partners with our clients to determine causes and find remedies for your challenges. We are available before and after a purchase to answer questions and support our clients. This approach is in the DNA of the company.

How did Prime Resins develop and why is that important to you?

Prime Resins grew out of a contracting company specializing in infrastructure repair. The company made products for its own use and its success in the field led to requests from other contractors to purchase material. Demand for our products became great enough to establish a separate company. Prime Resins was incorporated in 1982.

- We pioneered the use of polyurethane resins for sealing cracks in concrete, and helped build that market.
- We were first to package polyurethane grouts in an easy-to-use Quick-Mix cartridge system nearly 30 years ago.
- We have never stopped working to improve and expand our product line.

Our foundation in the infrastructure repair industry—and our ability to innovate—have helped shape the consultative approach at Prime Resins. Our technical consultants have been in your shoes and have a vested interest in helping solve your problems.

Scope of our business

Our clients range from multinational engineering firms and DOTs to independent contractors. We have customers, dealers, and distributors across North America and around the world.

Prime Resins also provides R&D services, special applications for other manufacturers (OEM solutions), and partners on industrial projects sold nationally and internationally. The latter include product development partnerships in Korea, Germany, and the Netherlands.

Product lines

Chemical Grout, Epoxy and Polyurea

- Polyurethane, epoxy, acrylic, and acrylate injection resins for leak sealing and soil stabilization
- Epoxy adhesives and injection resins for structural crack repair, bonding, and anchoring
- Epoxy and polyurea joint fillers for floor and joint repair
- Polyurethane and epoxy binding agents
- Polyurea and epoxy coatings for surface protection and lining

This lineup includes products that are independently tested and verified to meet NSF/ANSI Standard 61 for contact with drinking water and FDA CFR Sec. 175.300 for contact with food. All products are developed and made in the U.S.A.

Equipment:

We also develop equipment for use with our products.

- Pumps
- Sprayers
- Injection systems
- Applicator guns
- Accessories for applying coatings and grouts
- Trailer rigs for slab lifting and soil stabilization

We have the material, equipment, and expertise. We're problem solvers...

Let us help you find a solution.
